NATIONAL PROGRAMS

SPRAR (protection service for asylum seekers and refugees)

Regulated by the legislative decree n.142/15, the purpose is to guarantee protection, primary services and help to integration to asylum seekers arrived in Italy. The regulation expects each region in Italy to ensure a defined number of places for refugees. The distribution of those considers the dimension of each city:

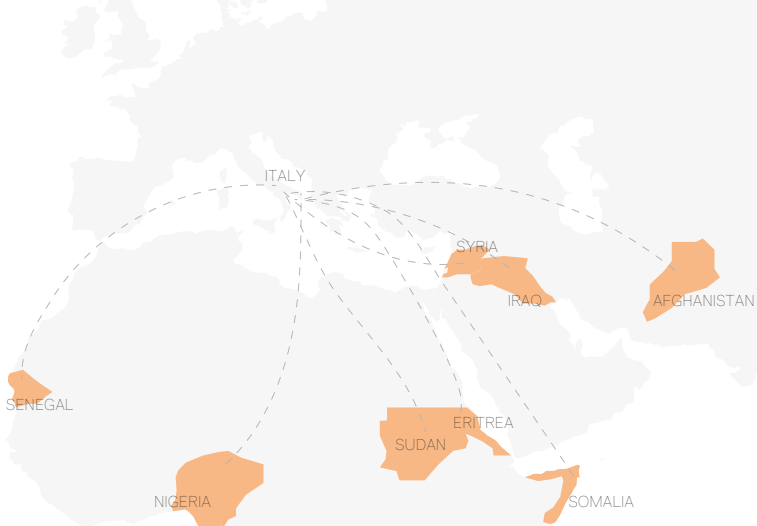

- Cities with more than 2000 inhabitants will ensure 6 places
- Cities considered as a metropolitan area ensure 2 places every 1000 inhabitants.
- Cities with more than 2000 inhabitants follow the calculation of 6 places adding the difference.

FUNDS

European funds, national funds and FAMI

The program for integration and first help for refugees is funded by national funds and European funds. Furthermore, if there is the need, the FAMI (migration and integration fund) is available to be used.

Who is joining the SPRAR program idea, has the benefit of the 95% of refund and has only to pay or invest the remaining 5%. This is regulated by the law 189/2002 and further ministerial decrees. The aim of the SPRAR program is to invite public entities to participate, to help with the integration process and to make available the use of facilities in the considered city.

EARTHQUAKE 2016

SOME DATA

- Total surface of damages
1.728 kmq
- Total inhabitants hitten
25.000
- Altimetric difference
13% of the territory higher than 15.000 m a.l.s.
30% of the territory under a level of 900 m a.l.s.
- Sismic area 1
Norcia, Amatrice, Preci, Accumoli,
Cascia, Monteleone di Spoleto
- Average age of constructions
70,8% of the 22.000 buildings hitten by the earthquake
were built before the 1971, year in which became
effective the anti-sismic regulation for buildings.

EMERGENCY ANSWER

People who lost their place to live have the choice to move to a temporary shelter or to hotels in free rooms. If the living place has not big damages, only partial ones, the inhabitant can ask for a fund (C.a.s.) which guarantees the cover of the costs of fixing. In a time of 2 months usually the container areas are ready. These have to host people still waiting for their home to be checked out and who are not able to stay anymore in shelters. This container are residential ones, but they offer also services as mensa and medical support.

Only on request people will receive the S.a.e, a residential building with all the necessary furniture and items a person can use. Normally the offer for the typology and method of construction of these building is made by specialized firms which develop emergency constructive systems. The firm which wins the public procurement has the right to propose and build S.a.e in the chosen area. The construction of the provvisory houses need for each 7 days 23 coworkers. Only when a number of S.a.e is built, they can be delivered to the inhabitants.

Province of Perugia

City square of Norcia

Processing of culinary products
Pork meat
Cheese products

Processing of wood
Local beech wood

Processing of metals
Wrought-iron items

SITE CHOICE

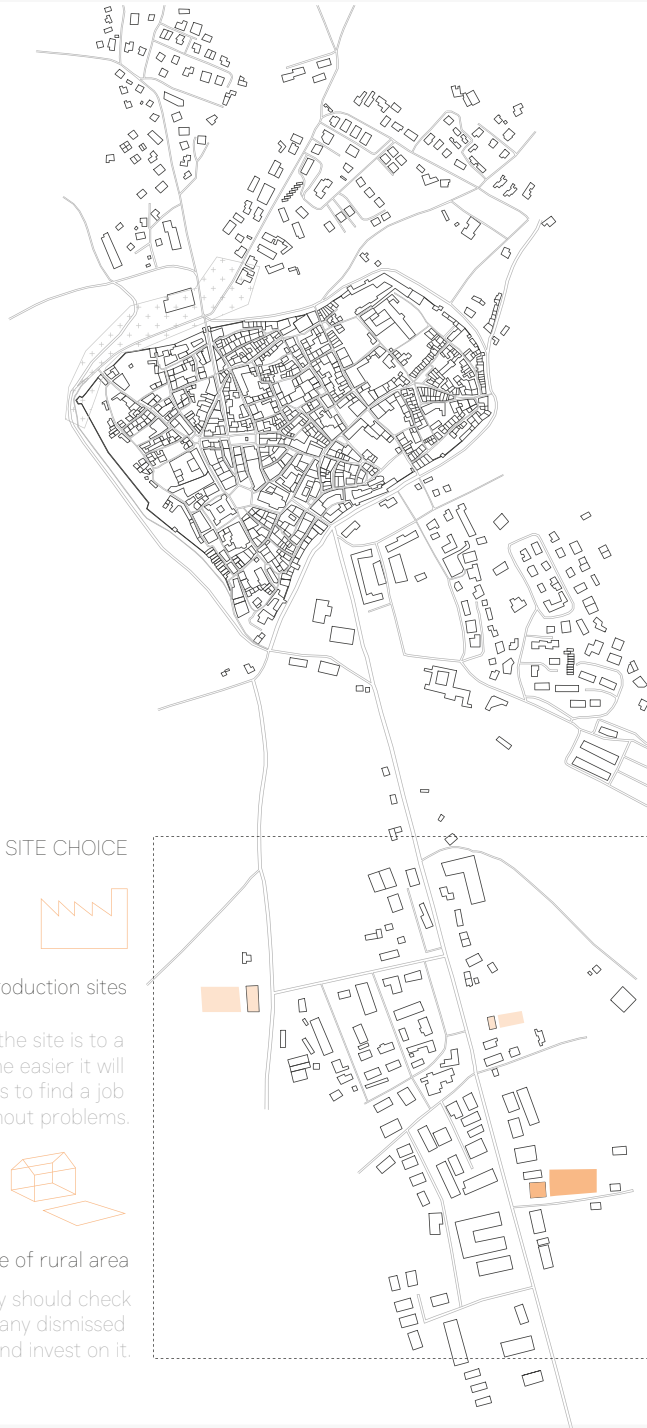

Nearness to production sites

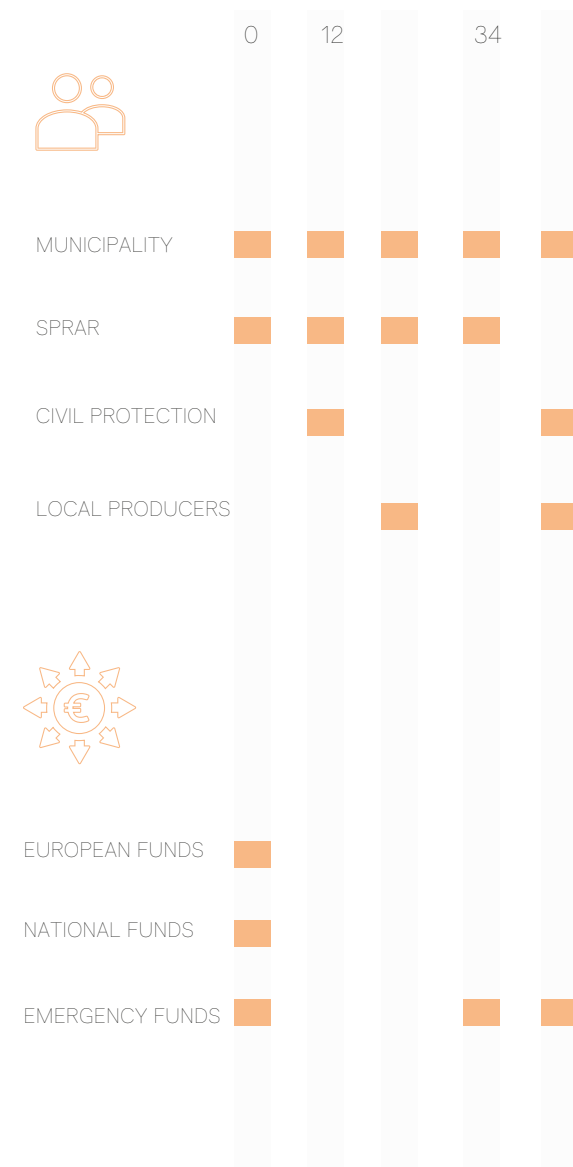

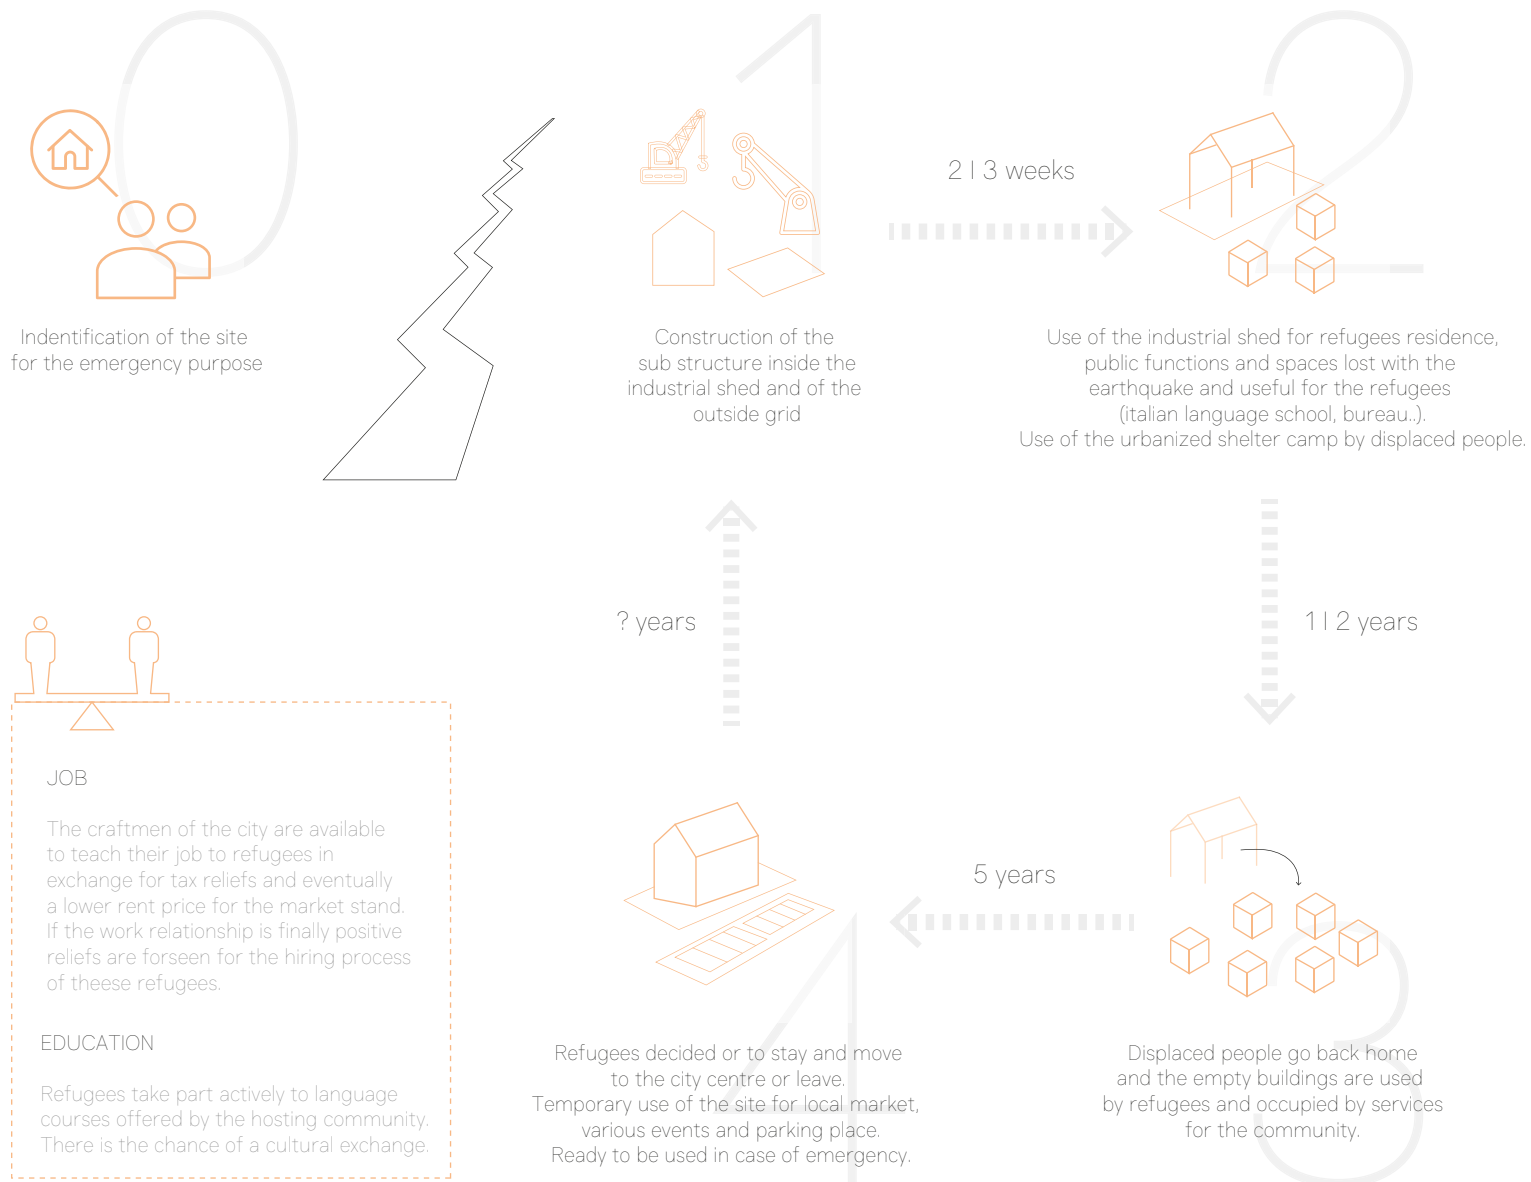

The closer the site is to a productive area the easier it will be for refugees to find a job and go there without problems.

Dismissed site of rural area

The Municipality should check out if there is any dismissed site available and invest on it.

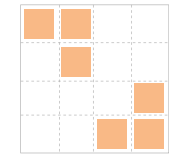

CONCEPT

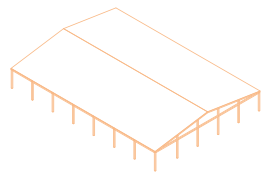

DISPLACED PEOPLE

Solidarity
Mutual help
Sense of community

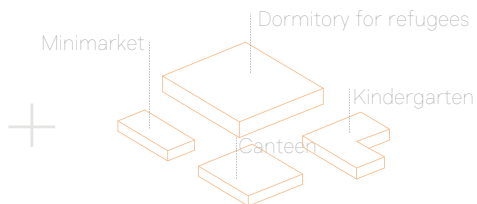

Cluster organization
Interaction spaces

INDUSTRIAL SHED

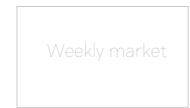

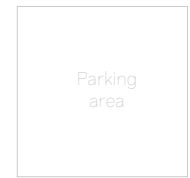

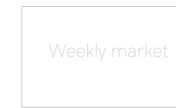

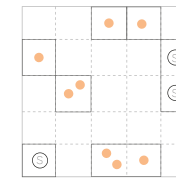

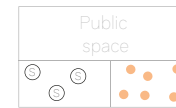

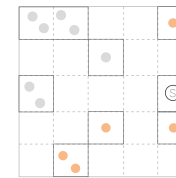

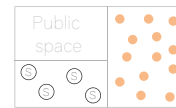

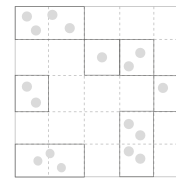

The building needs to be empty and only the structure and roof are needed

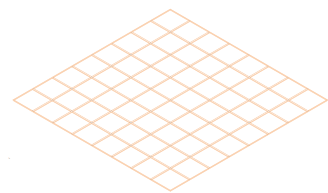

Boxes of a light material are assembled and plugged inside the farm structure.

TURNOVER PROCESS

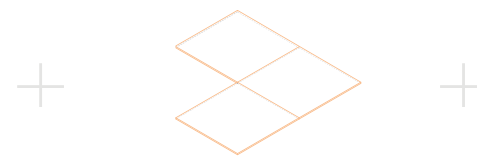

- Displaced people
- Refugees
- Ⓢ Services

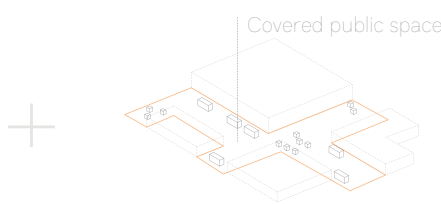

RESIDENTIAL BUILDINGS

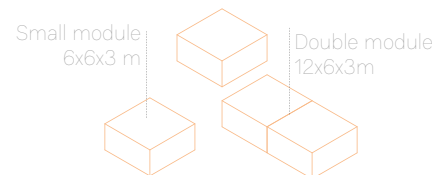

A grid with modular dimension (5X5m) is fixed on the ground with the aim to be plugged to the houses.

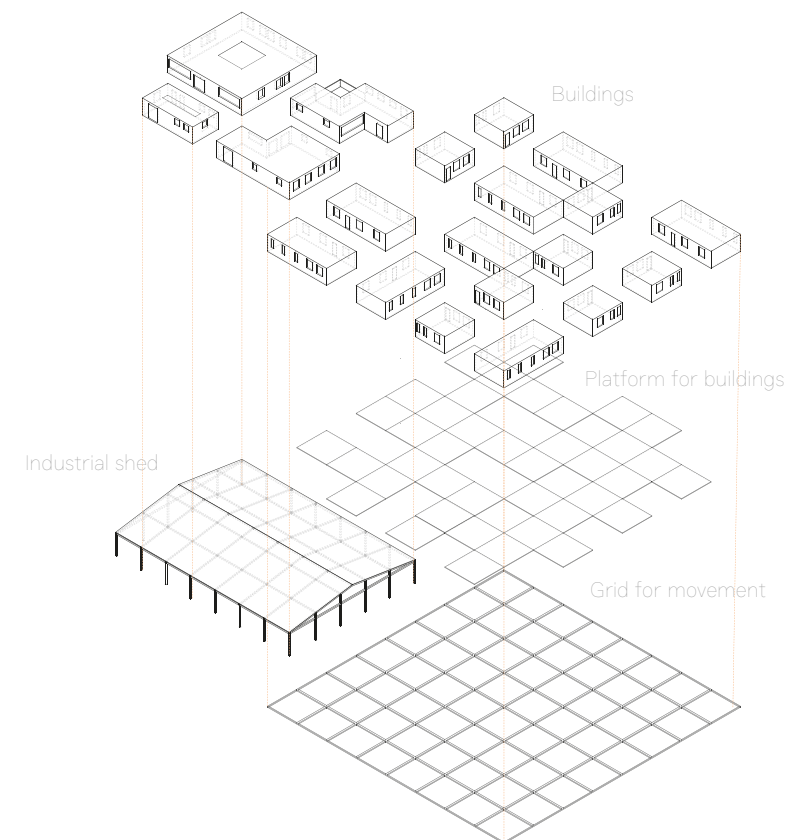

Upon the grid there are platforms which consent to move without danger and contains the houses.

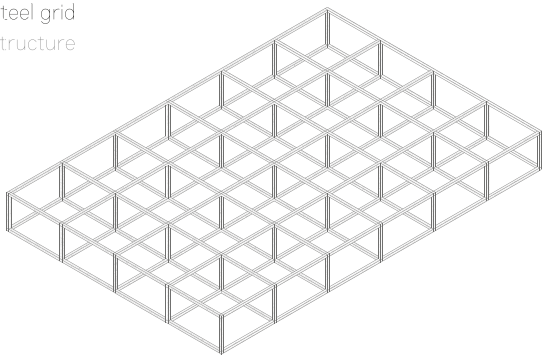

The space in between the boxes can be used as weekly market or craft markets, or as simply public space

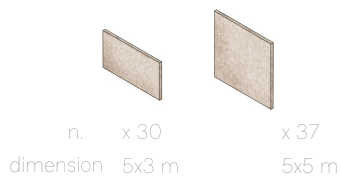

The houses are plugged to the platform. Their disposition is free, it is a modifiable conformation.

Steel grid structure

OSB panels plugging

FUNCTIONS

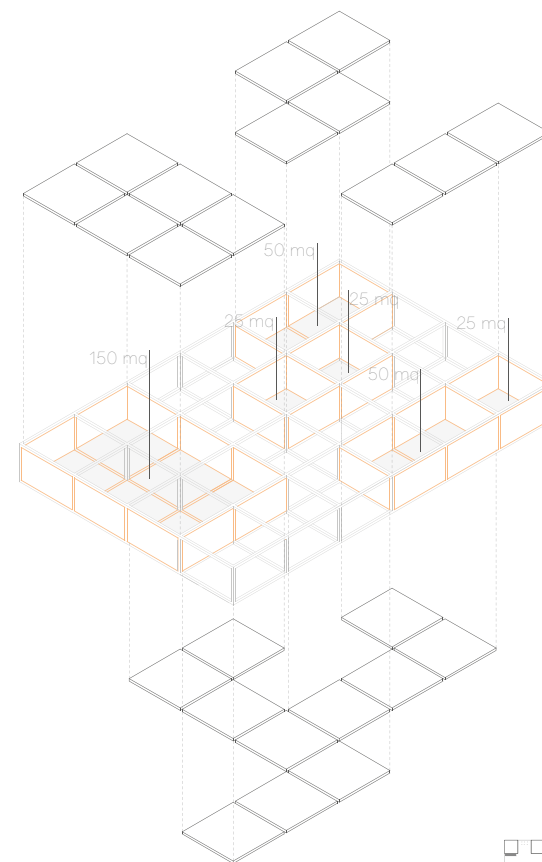

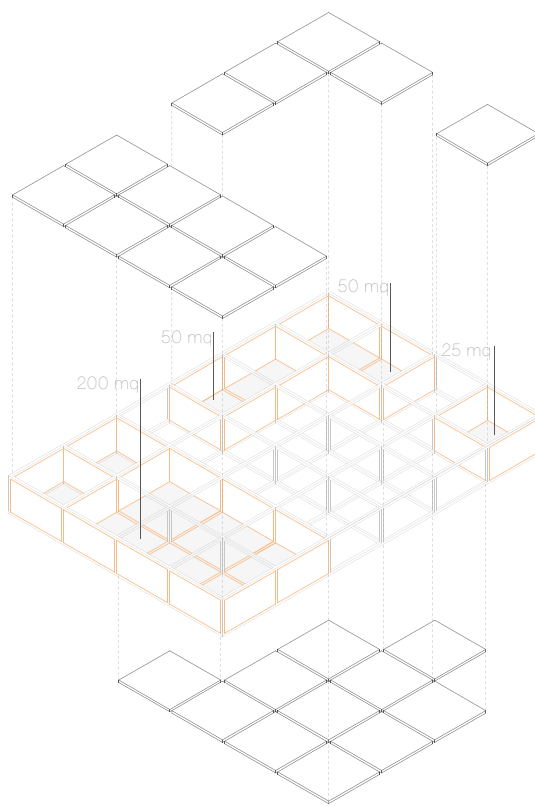

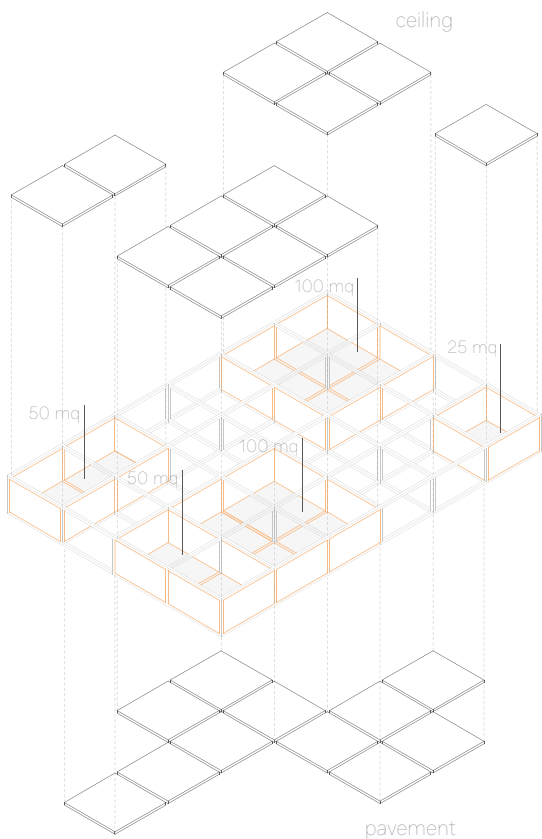

SUB STRUCTURE

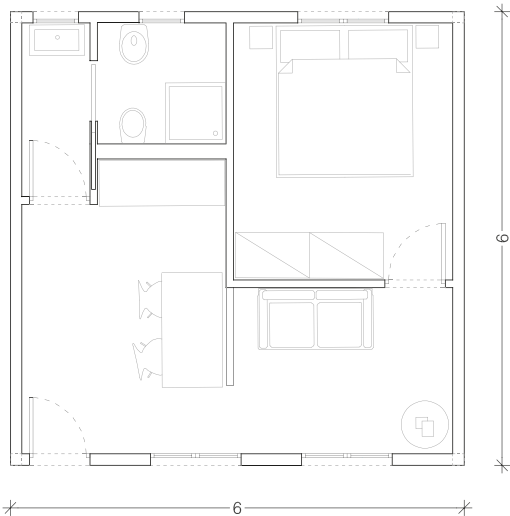

The buildings are plugged into a sub structure of the industrial shed. Strength of this solution is that there is no need to build a new structure, to start the necessary excavations and to take time to do it.

ADAPTABILITY

The chance to modify the inner accommodation is allowed thanks to the wall panel, supposedly in a wooden material, which are plugged to the main structure. For every lapse of the process rooms can become bigger or smaller, some functions can be added and other removed.

POSSIBLE CONFIGURATIONS

GROUND FLOOR

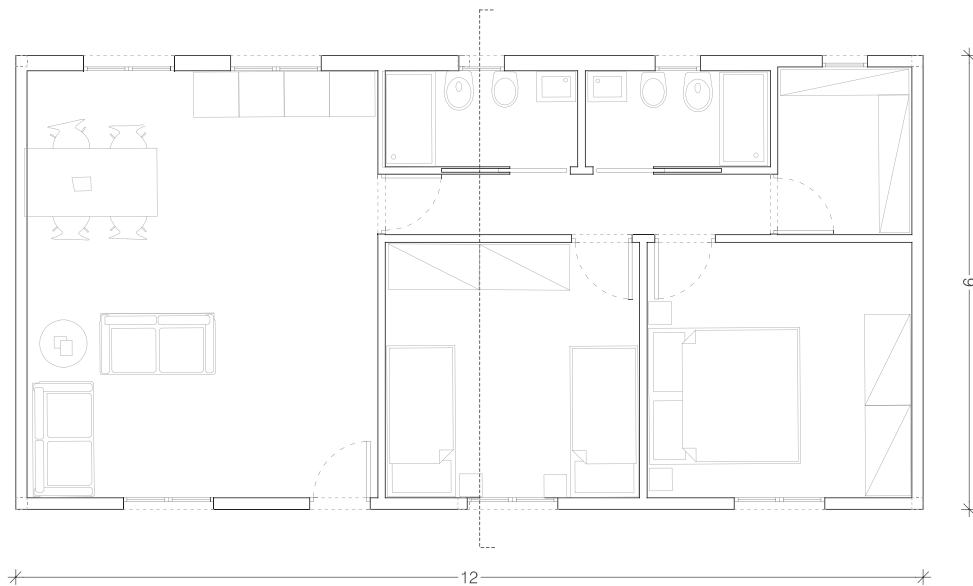

35 mq

LIVING SPACE

Living room and kitchen
1 toilette
1 double bedroom

OPENINGS

Openings are only on two sides because of the chance to join the modules and create a bigger one.

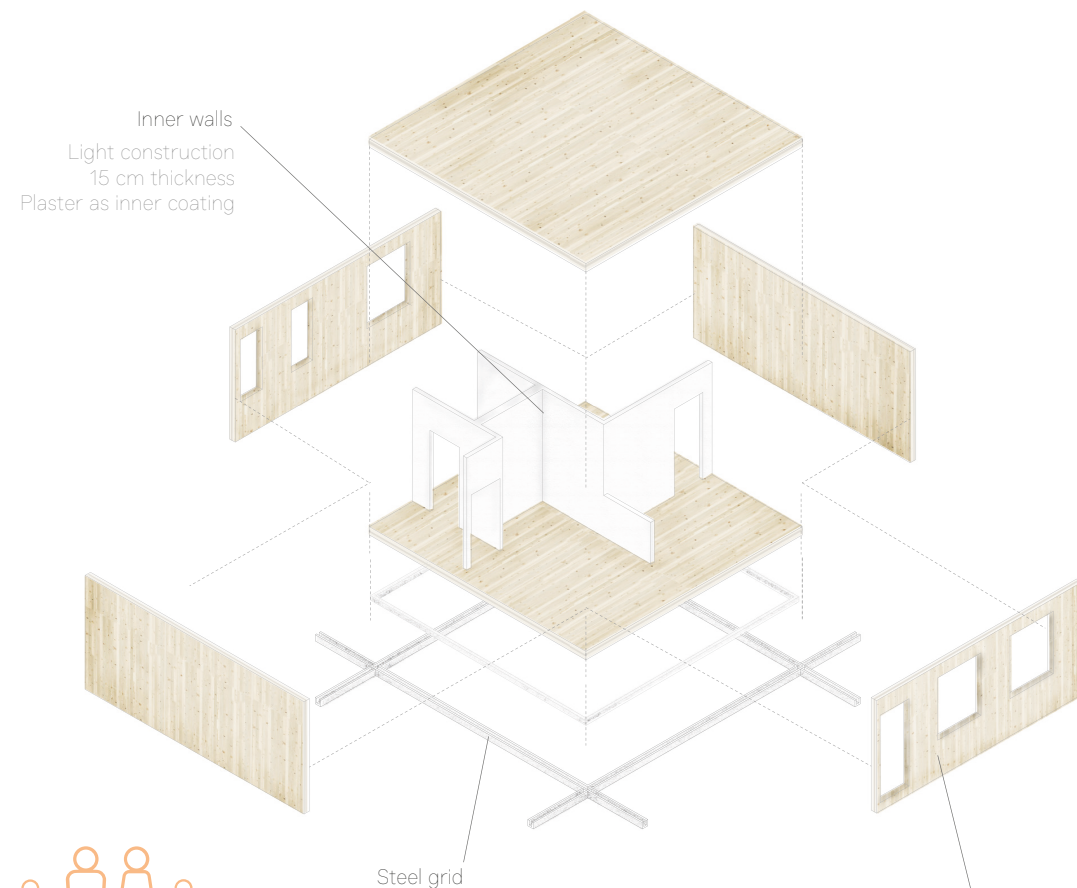

GROUND FLOOR

70 mq

LIVING SPACE

Living room and kitchen
2 toilettes
2 double bedrooms

Steel grid

X-LAM structure
3 layers (10 cm thickness)
Load-bearing structure
Antiseismic qualities
Good thermic insulation features
Local production of beech wood
